

Functional enrichment of niche-specific genes

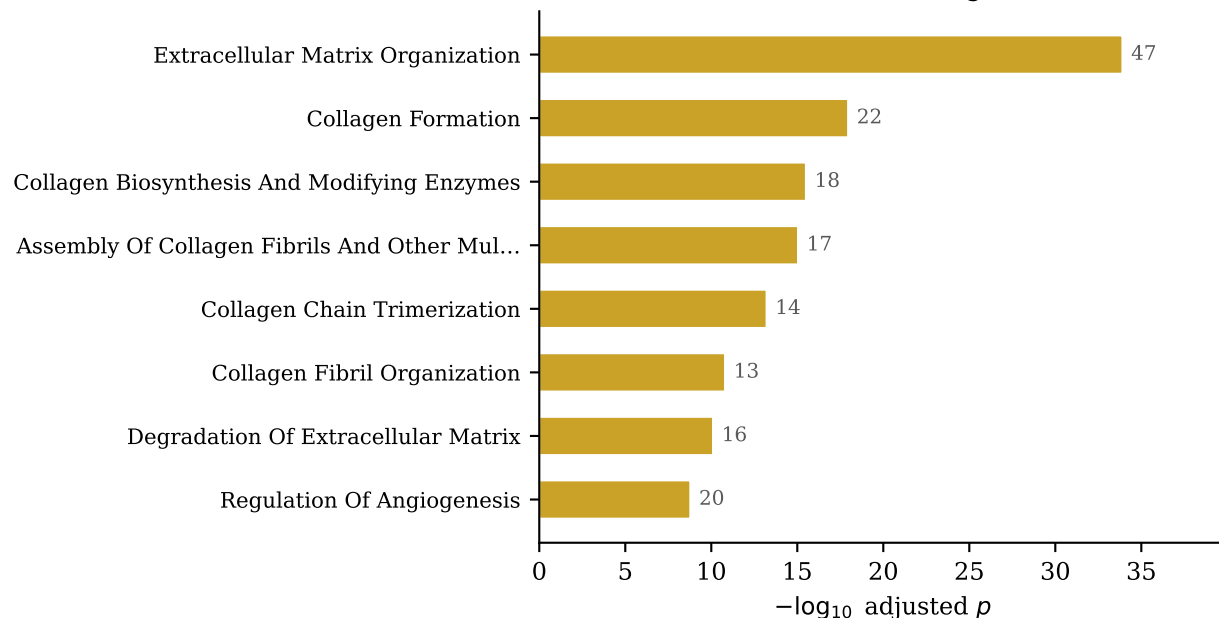

Tumour and epidermis (300 genes submitted)

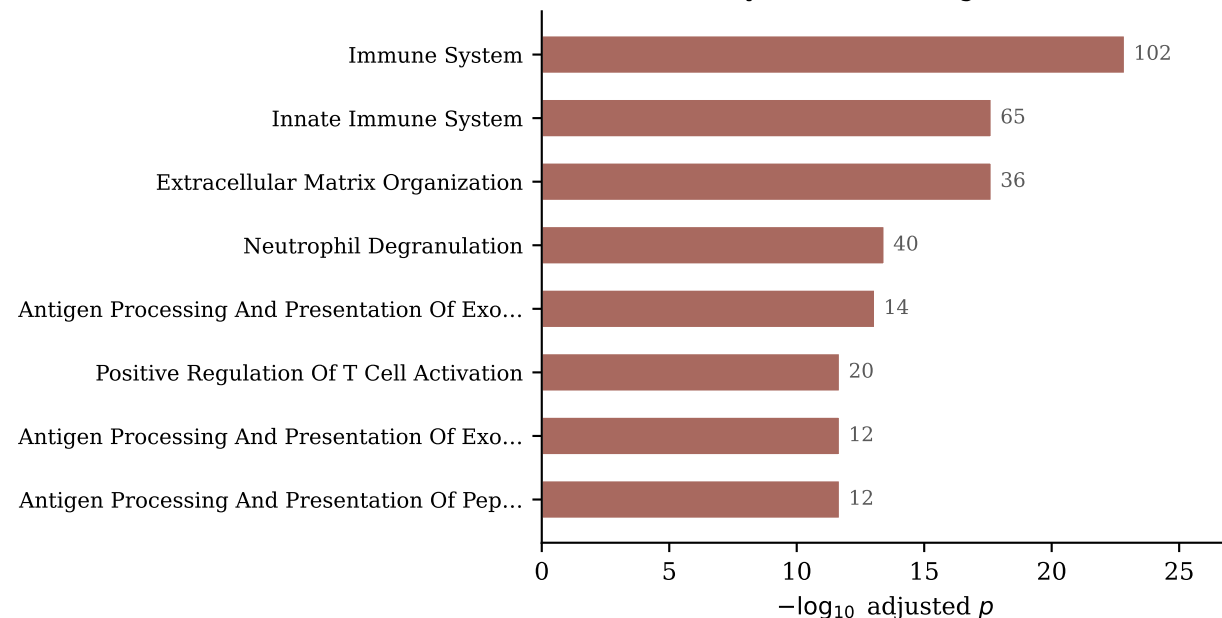

Epithelial-stromal interface (8 genes submitted)

Fibroblast-rich stroma (233 genes submitted)

Inflammatory stroma (300 genes submitted)

Numbers at the end of each bar give how many submitted genes fall in that term. Terms come from GO Biological Process 2023 and Reactome 2022, and are restricted to those supported by at least 3 submitted genes.
